EXAGGERATED AND ADDITIVE ACTH RESPONSES TO COMBINED ADMINISTRATION OF
GHRELIN + CRH IN PATIENTS WITH CUSHING’S DISEASE

INTRODUCTION

ACTH secretion is stimulated at hypothalamic level by CRH and vasopressin. Ghrelin, the gut-brain
europeptide, is also able to stimulate hypothalamo-pituitary-adrenal axis. Over
expression of ghrelin receptors on corticotroph adenoma cells can at least in
part account for exaggerated ACTH and cortisol responses to ghrelin found in
patients with Cushing’s disease (CD).

We studied the role of ghrelin alone or in combination with CRH in the regulation
of ACTH secretion in patients with CD and healthy subjects.

PATIENTS AND METHODS

- CRH 100 µg iv bolus
- Acylated ghrelin 100 µg iv bolus
- CRH+ghrelin iv bolus
- Random order, week apart
- ACTH, cortisol, PRL, GH responses at 0,15,30, 45, 60, 90, 120 min
- Peak and AUC responses were analyzed
- Clinical setting

Table 2. Protocol of investigation

RESULTS

Fig. 1. ACTH responses in patients with CD and controls. ACTH responses to ghrelin and CRH are exaggerated in CD patients
compared to healthy controls. Mean values of peak and AUC ACTH responses to co-administration of ghrelin+CRH are additive in both
groups, but higher in CD.

Fig. 2. Individual patterns of ACTH responses to ghrelin+CRH in CD and controls. Synergism was more common in patients with CD.

Fig. 3. Cortisol responses in CD patients and controls. Cortisol responses to ghrelin and CRH are exaggerated in CD patients
compared to healthy controls, but not additive after ghrelin+CRH co-
administration.

Fig. 4. GH responses in CD and controls. GH responses to ghrelin are decreased in CD compared to control subjects.

Fig. 5. PRL responses in CD and controls. PRL responses to ghrelin are similar in CD and control subjects.

CONCLUSION

ACTH and cortisol secretion remains regulated and responsive to trophic stimuli in patients with CD. Patterns of additive and
synergistic ACTH responses after co-administration of CRH+ghrelin, suggest:
1) individual HPA axis tuning
2) combination of pituitary and hypothalamic mechanisms in the
regulation of ACTH secretion in both health and CD.
